

1

```
class DemoObject {  
    te StringProperty name = new StringPr  
    te StringProperty mail = new StringPr  
    usual  
    te StringProperty shouldNoBeInTheForm  
    te BooleanProperty lucky = new Boolea  
    te EnumProperty<TestEnum  
    te IntegerProperty age  
    te DoubleProperty height
```

**Write your model bean**  
The model bean that should be edited in your interface

2

**Generate Form**  
FXForm creates the form and bind it to your bean properties

3

**Style it!**  
Using css and ressource bundle

```
class DemoObject {  
    te StringProperty name = new StringPr  
    te StringProperty mail = new StringPr  
    usual  
    te StringProperty shouldNoBeInTheForm  
    te BooleanProperty lucky = new Boolea  
    te EnumProperty<TestEnum  
    te IntegerProperty age  
    te DoubleProperty height
```
